

## Integrated Management of International Rivers in response to Climate Change

The Monash Sustainability Institute (Monash University) is co-ordinating a one-week workshop addressing international river management in response to climate change.

A particular emphasis will be on the Ganga and Brahmaputra river basins, South Asia. These basins are affected by climate change, population growth, urbanisation, and industrial development.

Important issues to be addressed at the workshop (in the context of likely climate change scenarios) include:

- water resource allocation policy;
- inter-agency co-ordination and collaboration;
- community development;
- spatial planning for natural resource management;
- governance; and
- geopolitical issues

The workshop is part of an Australian Leadership Awards (ALA) Fellowship program supported by AusAID. Noted scholars and policy makers from India and Australia will be participating.

Following the workshop, there will be ongoing discussions, field visits, and research and development planning sessions.

### Workshop Venue

'Treetops'  
Melbourne Museum  
Melbourne, Australia

### Workshop Dates

Monday 20 June to  
Friday 24 June, 2011
