Create your own tissue box habitat

## Instructions:

To create your own tissue box habitat, you will need an empty tissue box (a family-sized box works best), this A3 pdf instruction sheet printed, scissors, a glue stick and coloured pencils or textas. We have a short demonstration video to provide further assistance in creating your mini habitat. So be sure to check it out.

**Step 1.** Colour in the blank landscape shapes of the species habitat with your pencils or textas. The shapes are numbered 1 to 4.

**Step 2.** Carefully cut around the solid line of the different shapes.

**Step 3.** Printed on your shapes is a black dotted line between your colourful drawing and a grey printed strip. These grey strips are designed to be stuck onto the sides of the tissue box. Carefully fold along this dotted line on each of your shapes.

**Step 4.** Use your glue stick to cover the back of shape 1 and paste it to the back wall of your tissue box.

**Step 5.** Grab your glue stick again add glue to the grey printed strips of shape 2 and paste it within the tissue box. Do the same process with shapes 3 to 4. The demonstration video will help you here and show you where to stick the different shapes within the tissue box.
