The annual MURPA/QURPA program exposes final year undergraduate students to an international research experience within a leading research laboratory.

On Friday 18 October Dr Ilkay Altintas will present her seminar "On Workflow-Driven Science Using Scientific Workflows and Provenance" live to audiences in Melbourne and Brisbane.

Melbourne Date: Friday 18 October Time: 10.00 - 11.00am Location - Monash University: Seminar Room G12A, Building 26, Clayton Campus Enquiries: Caitlin Slattery (Faculty of IT)

Brisbane Date: Friday 18 October Time: 9.00 - 10.00am Location - University of Queensland: Seminar Room 505A, Building 47 (Axon), St Lucia Campus Enquiries: Sharon Cook (Research Computing Centre)

San Diego Date: Thursday 17 October Time: 4.00pm - 5.00pm Location: 5004 Meeting Room Enquiries: Teri Simas

Abstract: On Workflow-Driven Science Using Scientific Workflows and Provenance

Dr Ilkay Altintas

A scientific workflow is the process of combining data and processes into a configurable, structured set of steps that implement semi-automated computational solutions of a scientific problem. Scientific workflow systems promote scientific discovery by supporting the scientific workflow design and execution. Kepler (http://kepler-project.org) is an open-source, cross-project collaboration to develop a scientific workflow system for multiple disciplines, providing a workflow environment for scientists. Kepler Scientific Workflow Environment supports the design, execution, and management of scientific and engineering workflows through dedicated capabilities including provenance management, run management and reporting tools, integration of distributed computation and data management technologies, ability to ingest local and remote scripts, and sensor management and data streaming interfaces. With its built-in instrumentation to capture provenance (execution history) of workflows and related data, Kepler workflows make it easier to track information about how products were derived, and enable understanding, reproduction, and verification of scientific results. This presentation will overview various scientific applications developed in Kepler and explain how different community cyberinfrastructure projects use Kepler scientific workflows and provenance as a part of their architecture. In addition, the presentation will cover how scientific workflows can be applied to big data applications with applications in bioinformatics.
