Connecting by rail

Leading Aus rail research institute to work with Indian Railways

Monash University’s Institute of Railway Technology (IRT), in partnership with India’s Railways, will develop a new state-of-the-art railway research and development institute in India. The aim is to become a world leader in railway technology.

The project will also provide guidance to Indian Railways on international models that can be adapted to the Indian railway environment.

Mr. Ravi Ravishanker, Director of Institute for Railway Technology, said Indian Railways is looking forward to working with IRT.

Mr. Ravishanker said: “We are excited to work with IRT and look forward to the development of a new state-of-the-art railway research and development institute in India.”

India will have a local engaged organisation but with a global reach. India will have a local engaged organisation but with a global reach.

India, the largest railway network in the world, is expected to benefit from IRT’s expertise. The project will also provide guidance to Indian Railways on international models that can be adapted to the Indian railway environment.
