

## **Tomakomai CCS Demonstration Project - Japan's first full chain CCS project**

The Tomakomai CCS Demonstration Project is Japan's first full chain CCS project, from CO2 capture to injection and storage. CO2 derived from an industrial source is being injected and stored in sub-seabed saline aquifers in the offshore area of Tomakomai, Hokkaido Prefecture, Japan. Unique features of the project include an energy efficient capture process and deviated injection wells from onshore to offshore. Extensive monitoring is being conducted to address concerns about earthquakes.

**WHEN:** Wednesday June 21st  
**WHERE:** G29, New Horizons Building  
20 Research Way, Clayton  
**TIME:** 4:00 - 5:00 pm
