Brain Recovery and Rehabilitation Research Group

Group Leader: Professor Natasha Lannin

The Brain Recovery and Rehabilitation Research Group is dedicated to improving the long-term outcomes for adults after neurological damage and disease.

Our research focuses on enabling the independence and vocational outcomes of people with brain disorders and injuries through

- Clinical trials testing the efficacy of non-pharmacological rehabilitation treatments
- Health service evaluations of novel models of delivery
- Implementation of research into clinical care

By undertaking clinical trials, testing the efficacy of non-drug based rehabilitation, and a focus on implementation, the Brain Recovery and Rehabilitation Research Group collaborates internationally to improve client outcomes from brain injury and disease. Our Group is a multi-professional staff and student team of over 20 people with a dynamic research portfolio that has gained both national and international recognition.

Professor Natasha Lannin is a Professor in Neurosciences and an occupational therapist by professional background. She is a Heart Foundation Senior Future Leader and as such has been recognised as one of the nation's most outstanding leaders of clinical and applied health research in stroke.
