

# TECHNOLOGY FOR EDUCATION IN CLINICAL HEALTHCARE (EDTECH)

The current digital landscape provides exciting opportunities for educators to embrace the EdTech movement and create learning experiences that excite and motivate learners.

In this interactive online course, you'll discover how to use current technologies and social media tools to creatively and effectively design your teaching activities and optimise their educational value. With consideration to the importance of human cognitive processing in eLearning, our international faculty will also cover basic principles of educational design.

Our goal is for you to play, explore, and have fun with technology, so that you can feel comfortable incorporating it into your teaching immediately.

## LEARNING OBJECTIVES

- Develop online education material and host it in a Learning Management System.
- Use technology to enhance learning activities inside and outside the classroom.
- Use social media to engage your learners.
- Design short videos for online teaching modules.

- Apply cognitive science and educational design principles to the design of your EdTech modules.

## WHO SHOULD ATTEND

Technology for Education in Clinical Healthcare (EdTech) is designed for educators who want a head start in creating engaging interactive learning resources, a guided experience in evaluating and experimenting with new technologies, and an opportunity to explore current educational and cognitive science research in order to develop programs grounded in sound educational principles.

## ACCELERATE YOUR QUALIFICATION

Eligible participants who complete the assessed version of this short course can receive 6 credit points towards the Graduate Certificate of Health Professions Education.
