Monash University

1,249 students participated in the survey

PREVALENCE IN A UNIVERSITY CONTEXT

Sexual harassment
15.3% since starting university
7.3% in the past 12 months

Sexual assault
5.1% since starting university
0.7%* in the past 12 months

REPORTING AND SUPPORT SEEKING

Formal complaints made to the university
2.7%* of students who were sexually harassed made a formal complaint

Seeking support from the university
19.9% of students who were sexually harassed sought support or assistance

Knowledge of university support and reporting channels

- 46.7% know nothing or very little about where to go to make a complaint about sexual harassment
- 48.0% know nothing or very little about where to go to make a complaint about sexual assault
- 41.0% know nothing or very little about where to seek support or assistance for harassment
- 37.8% know nothing or very little about where to seek support or assistance for assault

CONTEXT OF MOST IMPACTFUL INCIDENT

Location
- General campus areas: 38.5%
- Clubs and societies, events and spaces: 16.4%
- Hospitality or retail areas on campus: 11.9%

Perpetrator
- 54.6% knew some or all of the perpetrators involved

Differently described gender includes students whose gender identity was not classified as female or male. Gender identity was derived using the 'two-step method' of cross-classifying responses to sex assigned at birth and current gender. Context of most impactful incident. Students who had been sexually harassed in a university context were asked questions about the context of the most impactful (or significant) incident they had experienced. This incident was self-identified by the student.

Experiences of sexual harassment in the past 12 months
- Female: 9.3%
- Male: 4.5%
- Differently-described gender: 10.9%*

Experiences of sexual assault in the past 12 months
- Female: 1.1%*
- Male**:
- Differently-described gender**:

Relative standard errors (RSE) were calculated for survey estimates. If the RSE was between 25% and 50% an * appears next to the estimate that indicates caution should be used with the associated estimate. If the RSE was above 50% an ** appears meaning the estimate is unreliable and not reportable. Differently-described gender includes students whose gender identity was not classified as female or male. Gender identity was derived using the 'two-step method' of cross-classifying responses to sex assigned at birth and current gender. Context of most impactful incident.
