

Professor Carolina Weller

Wound Research Unit

I research the causes and management of chronic wounds, such as venous leg ulcers and pressure injuries.

I lead the Aspirin in Venous Leg Ulcer clinical trial (ASPiVLU) and the Monash Partners Pressure Injury prevention and surveillance study.

I coordinate projects on impact and translation of evidence-based research findings into clinical practice. I also promote partnerships across health services management, delivery, research and consumers in wound management.

- ✓ Clinical trials
- ✓ Health and healing interventions
- ✓ Physical activity research
- ✓ Quantitative research
- ✓ Qualitative research
- ✓ Knowledge translation research
