ANNEX of the
Annual Report

2022 – Meeting Report

IGCP Project number and Title: IGCP673 Thé End of a Supereon - Winners and Losers at thé Precambrian-Phanerozoic Transition

1. MEETING(S):

Date: October 2022

Place: Southern Namibia (Farms Aar, Pockenbank, Anusi and others)

Itinerary: Team travelled from Windhoek to southern Namibia and spent 3 weeks on several of the farms hosting late Precambrian sequences that have been studied by this group and others for the past 20 years in detail.

2. SCOPE AND RESULTS OF MEETING:

Scope of Meeting (*program or outline of geological study*)

The scope of this meeting was to bring together all of the data gathered on this project which also included IGCP493 and 587 as well as 673 to put together a major research summary paper and a book as well as a popular publication for the general public. This involved not only members from Australia but from Namibia and incorporated data analytics from other collaborators globally.

Achievements of Meeting

All achieved and the book and research paper is underway along with the popular rendition.

Outcome of Meeting

All expected achieved but along with that were some major discoveries that will bring us back to a new farm to the south of Farm Aar and thus in 2023 we hope to access funding to follow this new discovery up.

Signature of Project Leader and Date
12 January 202

Patricia V. Reich
