

Monash Design & Construction Standards Statement of Compliance

Monash University has developed the Monash Design and Construction Standards (MDCS) to establish consistent minimum design, construction and performance standards for all build works on Monash campuses. On completion of project documentation, the design team must certify compliance with the MDCS and with Australian Standards and National Construction Code. This form sets out the requirements for certifying compliance.

COMPLIANCE WITH AUSTRALIAN STANDARDS AND NATIONAL CONSTRUCTION CODE (NCC)

All design and construction projects undertaken on behalf of Monash must comply with the relevant codes, including the National Construction Code (NCC) and Australian Standards. Any 'performance' and / or 'deemed to satisfy solutions' must be documented to the satisfaction of the relevant building surveyor.

COMPLIANCE WITH THE MDCS

All design and construction projects undertaken on behalf of Monash University must comply with the [MDCS](#). These are in addition to the relevant statutory requirements.

STATEMENT OF COMPLIANCE PROCEDURE:

On completion of project documentation, the design team must certify compliance with all relevant Australian Standards and National Construction Codes and the MDCS.

Compliance Tool:

Monash has developed a compliance tool that is available to all consultants, designers and contractors on the [MDCS website](#). The compliance tool is the MDCS in a table format. It has been developed to assist the design team with checking all items within each technical section of the MDCS.

If used by the design team, a copy of this tool must be attached to this form.

Additional, if a departure from the MDCS has been approved throughout the design phase, the approved Design Dispensation form must be attached with the Statement of Compliance Form.

The completed Statement of Compliance form with attachments as required, should be submitted to: bpd.assetdocumentation@monash.edu

This section is to be completed by the Consultant
