# VISUAL CATALOGUE

Bringing fresh opportunities through healthy snacking to corporate offices, foodservice and gifting.

# ABOUT SNACK PROUD

- Female-founded business
- Premium healthy snacks at everyday prices
- Smaller portions, designed for free issue or gifting
- Strong reputation with top employers

Snack Proud was founded in 2016 by Ashleigh Whittaker, as a result of witnessing the impact sugary, energy-depleting snacks had on her colleagues. By curating healthy snack boxes and manufacturing a selection of our own products, Snack Proud has built a much-loved office snacking brand.

Following the COVID-19 global health pandemic, we realised employers and gift-givers were looking for tasty, modern and innovative healthier snacks instead of the usual sugary options

Snack Proud's delicious, on-trend snacks are free of common allergens so no one misses out. This gives companies a way to boost their culture and keep staff happy, as well as giving employees a compelling reason to come back to the office!

# STRIVING FOR MORE SUSTAINABLE SNACKING SOLUTIONS

Are you looking to reduce single-use plastics?

Snack Proud is committed to having 50% of our Snack Proud branded range in compostable packaging by the end of 2024.

Home compostable is different from recyclable and bio-degradable packaging. It doesn't need to be disposed of in an industrial waste steam. It will break down in 26 weeks the following way.

Look out for this symbol

Snack Proud creates delicious snacks in home compostable packaging. This is plant-based and uses non-toxic inks. It is not plastic so feels different ( more like paper) but looks great on display.

# WASTE MADE FILM

We really love this packaging innovation. Instead of creating a 'new' film out of compostable materials, these products use a plastic material that is diverted from landfills.

Old water bottles, soft plastics etc are melted down and reused. It's not just partly recycled it is 100% recycled.

Carbon emissions for this process are lower than manufacturing compostable film and significantly lower than manufacturing plastic film.
