Cancer Registries - Joining the Dots: Linking Clinic, Laboratory and Patient Populations

Key Speakers: Professor John McNeil, Head, Department of Epidemiology and Preventive Medicine, Monash University

A/Prof Jeremy Millar, Director, Radiation Oncology, Alfred Health

A/Prof Andrew Spencer, Head Malignant Haematology and Stem Cell Transplant Service, Alfred Health

Dr Robert Stirling, Respiratory Physician, Alfred Health

There is increasing recognition of the importance of high-quality registry-based systems both in Australia and overseas.

A number of Cancer Registries are being developed by Monash University’s Department of Epidemiology and Preventive Medicine, including Prostate, Lung, Colorectal and Myeloma. These registries form a solid foundation around which almost all quality improvement, service and system reform can be built. They provide information which enables linkages between laboratory work and patient outcomes and will allow the ability to evaluate the effect of discoveries and innovations, and offer feedback to further strengthen research efforts.

NB: After hours access (6.00pm onwards) will require swipe card access or staff assistance. There are no problems leaving the building at any time.
