**Part 3 - Declaration**

- I understand that a single injection of the meningococcal meningitis immunisation will be given subcutaneously.
- I understand that the immunisation should last 3-5 years.
- I understand that reactions to the injection are similar to those after any immunisation, most commonly soreness and inflammation at the injection site. Less commonly fever and chills may occur. Upper respiratory tract illness, headache and lethargy occur occasionally. Allergic reactions are rare.
- I understand that the immunisation should give antibody response to some (Groups A&C, possibly W135 &Y) forms of meningococcal infection, but it does not give protection from all forms of meningococcal infection.
- I understand that part 4 of this form will be completed by the clinic which performs the immunisation. Once the course of immunisations has been completed, this form will be forwarded by the immunising clinic to OHS.
- I understand that my Manager/Supervisor may be notified regarding my immunisation status.
- I give my consent to be immunized with meningococcal polysaccharide immunisation.
