

Standard entry HWA calculation example

The HWA is calculated as follows:

- Individual unit mark x credit points = unit total
- Add the unit totals for the eight units per year level. The sum = year level total.
Note: In year three (less elective unit mark) and in year four less PEP unit total (seven units only or 42 credit points per year level)
- The sum of the four year level totals divided by credit points (180 credit points without the elective and PEP unit) = HWA mark

Failed unit calculation

Numerical adjustments are made for students who have **failed and repeated** a unit. The failed unit is included in the average, while the result from the repeated unit is adjusted as follows:

- Final attempt (repeated) mark * 0.9

Advanced standing /unit credit entry HWA calculation example

The HWA is calculated as follows:

- Individual unit mark x credit points = unit total (for any units completed in commencing year level)
- Add the unit totals for however many units were taken in the commencing year units. The sum = year level total. Divide this by the amount of credit points for those units and multiply by 48.
- The sum of the four year level totals divided by credit points (180 credit points without the elective and PEP unit) = HWA mark

Advanced standing / block credit or Graduate Entry Pathway entry HWA calculation example

The HWA is calculated as follows:

- Individual unit mark from 3rd year commencement x credit points = unit total
- Do this for 7 units in a year level and add together = year level total. *Note: In year three (less elective unit mark) and in year four less PEP unit total.*
- To determine years one and two take the average of the 3 & 4 year level totals and divide by 42 credit points then multiply by 48 credit points = year level total (years 1 & 2)
- The sum of the four year level totals divided by credit points (180 credit points without the elective and PEP unit) = HWA mark
