

Leadership and Innovation in Health 2020

Project Proposal

Throughout Leadership and Innovation in Health, you will have the opportunity to apply your learning to a project that you bring to the course. This project can be a challenge or opportunity that you have in your professional context. You will receive feedback from fellow scholars on your project, and have an opportunity at the end of the course to present your updated project to your fellow project group members, having included modifications and advancements you have made following your learning and their feedback.

The following information will be requested from you through our [application portal](#).

Project title

Project proposal

To ensure that you achieve professionally relevant outcomes from this course we request that you develop a small project that will frame your work during the week. Your project should represent a challenge that you would like to address in your work in the health professions, and will form the foundation of your learning during the course. (approx. 100 words)

Focus of project

What is the primary focus of your project? What question, concern, problem, or situation is addressed by your project? (approx. 100 words)

Project and assessment design

List 1-3 specific goals of your project. Describe your project, plan for implementation. Identify 2-3 short-term indicators that progress is being made. What outcome(s) will define success? (approx. 100 words)

System in which your project will be introduced

What individuals or groups (stakeholders) are needed to affect your plan? Who will be interested in or impacted by your proposal? What sources of resistance are you likely to encounter? (approx. 100 words)

What target population will your project implementation affect?
