Parallel Tools Platform (PTP)

The Parallel Tools Platform aims to provide a highly integrated environment specifically designed for parallel application development.

Features include:

- An integrated development environment (IDE) that supports a wide range of parallel architectures and runtime systems.
- A scalable parallel debugger.
- Parallel programming tools (MPI, OpenMP, UPC, etc.).
- Support for the integration of parallel tools.
- An environment that simplifies the end-user interaction with parallel systems.

Why WHPC?

- Stable, portable platform for tool development
  - Focus on tool functionality, manage rapid evolution of HPC platforms
  - Encourage consistent tool look and feel
  - Support for HPC application development practices
    - Edit, build, test, debug, maintain, for maximum developer productivity
    - Remote development, batch execution mandatory
  - Track, store, search, browse code artifact provenance
  - Share tool functionality through an integration framework
  - Maintain tool identity
    - Provides for independent tool development pathways and funding
Why Parallel Tools Platform?

- High potential to meet needs of a WHPC.
- Target next generation of HPC developers growing up with IDEs (Eclipse, Visual Studio, ...)
- For PTP to become a WHPC need to:
  - Cultivate community of users
  - Make substantial improvements to PTP around two themes:
    - Improving usability
    - Improving productivity

Requirements and Impact

- Application-centric approach
  - Use real application codes, with PTP, on production computational resources
    - Identify specific goals to accomplish with each application
    - Use Eclipse PTP to accomplish the goals
    - Identify shortcomings in Eclipse PTP that need to be rectified for Eclipse PTP to be effective with that application workplan
  - This is part of our project team’s responsibility
  - Work with application community and learn from their experience with Eclipse PTP
Requirements and Impact (2)

- **Application-centric approach**
  - Work with application community and learn from their experience with Eclipse PTP
    - Bridge to TeraGrid and (now) XSEDE Advanced User Support
  - Work with targeted organizations to assist with adoption of PTP
  - Monthly user calls
  - Annual user group meeting
  - Hands on tutorials
  - Conference Birds of a Feather

Improvements

- Work within Eclipse release cycle
  - Major (API-breaking) improvements with coordinated June release
    - Last major release Eclipse 4.2 “Juno” released June 27, 2012
  - Minor enhancements and bug-fixes with two coordinated service releases in September and February
    - Eclipse 4.2 SR1 released Sept 28, 2012

- Foci of improvements
  - Improve usability
  - Improve productivity
Improve Usability

- Remote support and scalability enhancements
  - Broaden support of remote capabilities to full PTP
  - Provide for easy platform configuration management
  - Provide additional remote features
    - Automatic remote service deployment
    - Multiple authentication mechanism
    - Support wide range of resource managers
    - Full remote debug support
Improve Usability

- Integration with other tools
  - Improve External Tools Framework (ETFw)
    - Full remote support
    - Integration of tool output with Eclipse views
- Improve and broaden parallel paradigm support
  - Driven by user needs and feedback
Improve Productivity

- Provide support for performance driven refactoring
- Track source and executable code provenance
Significant Recent Improvements

- User-configurable machine configuration
- Wide variety of configurations now available:
- Documentation, tutorial at
Scalable System Monitoring

- System view
- Jobs running on system
- Active jobs
- Inactive jobs
- Messages
- Console

Running an Application
Synchronized Projects

Projects types can be:

Blue Waters Enhancements

- **Blue Waters**: Cray XE6/XK7 at NCSA
- PTP did not work with Crays “out of the box”
  - Could not submit jobs with appropriate aprun options
  - Could not monitor status of compute nodes
  - Could not set environment modules for build
  - Did not recognize Cray, PGI compilers’ errors messages
  - Did not support OpenACC
  - ...
- Less than 6 months to fix these for PTP 6.0 (!)
Integrated OpenACC documentation and PLDT support (added for BW)

Documentation also available for MPI, OpenMP

OpenACC™ parallel directive

Delineates a block of code that will be executed on an accelerator device.

```
!$acc parallel loop
  do i = 1, 1000
    c(:, :) = (a(:, :) + b(:, :) - 2.d0 #pragma acc parallel [clause [, clause ...]] block
    a(:, :) = (a(:, :) + c(:, :) - 2.d0 #pragma acc parallel [clause [, clause ...]] block
    b(:, :) = (b(:, :) + c(:, :) - 2.d0 #pragma acc parallel [clause [, clause ...]] block
  end do
!$acc end parallel loop
```

Supported clauses are if, async, num_gangs, num_workers, vector_length, reduction, copy, copyin, copyout, create, present, present_or_copy, present_or_copyin, present_or_copyout, present_or_create, deviceptr, private, firstprivate.
Code completion for OpenACC directives (added for BW)
After the build, compiler errors, warnings, and loopmark information are shown in the Problems view and source code editor.

(Cray, PGI support added for BW)
Graphical interface for launching a job (customized for BW)

Additional Plug-ins from NCSA

- NCSA publishes additional plug-ins can be added onto an existing PTP installation
  - [http://forecaster.ncsa.uiuc.edu/help/index.jsp](http://forecaster.ncsa.uiuc.edu/help/index.jsp)
- Contribute a **System** menu to the menu bar with XSEDE- and NCSA-specific commands

![System menu example](image)
System Menu

- Open Web content in Eclipse:
  - Open XSEDE User Portal
  - Open User Guide for a machine
  - Open an SSH terminal (as an Eclipse view)

Eclipse-integrated SSH terminals are provided by the Remote System Explorer (RSE), one of the features that is included in the Eclipse for Parallel Application Developers package.
System Menu

_shortcuts for common PTP tasks:_

- **Add Remote Environment** adds a Remote Tools connection for a particular machine
- **Add System Monitor** opens the System Monitoring perspective and begins monitoring a particular machine
System Menu

- The plug-in is preconfigured with information about XSEDE and NCSA resources.
- The bottom four commands generally prompt for a system.
- Select System can be used to eliminate this prompt, so these commands always act on a particular system.
MyProxy Logon

- **MyProxy Logon** allows you to authenticate with a MyProxy server
  - Often myproxy.teragrid.org
- It stores a “credential,” which is usually valid for 12 hours
- During these 12 hours, SSH connections to XSEDE resources will not require a password; they can use the stored credential
  - However, you **must** enter the correct username for that machine!
Improvements in the works...

- External Tools Framework (ETFW) being transitioned to use the resource manager “JAXB” XML descriptions.
  - Enhanced flexibility for tool integration
- Environment Management enhancements
  - Ordering of modules (important for some machines)
  - Evaluate proper role and relationship between environment management, scanner-discovery and tool chains
    - Would like to properly set remote include paths (semi)-automatically!
- Separate Build system from CDT build
  - Cleaner multi-system build management
  - Builds in any language

Parallel Tools Platform (PTP) User Guide

Parallel Tools Platform

Release 5.0

The Parallel Tools Platform is designed to allow the Eclipse framework to be used for developing parallel applications for parallel computer systems. PTP provides the following functionality:

- tools for developing applications based on the Message Passing Interface (MPI) standard and other environments and APIs including OpenMP, UPC, etc.
- the ability to launch, control and monitor the execution of parallel programs
- the ability to monitor parallel system status information
- an integrated parallel debugger
- a framework for integrating external dynamic tools

In addition, PTP provides a platform for parallel tool developers to integrate their tools within the Eclipse framework. New tools can take advantage of the user interface components and parallel services that are provided by PTP, without the need to develop and support this infrastructure on multiple platforms.

More information and downloads are available at http://eclipse.org/ptp.
Adapting Eclipse Documentation to Other Projects: QMCPack

See http://code.google.com/p/qmcpack-doc/

Developers' and users' guides

org.cmcc.qmcpack.doc is developed as an eclipse plug-in for QMCPACK help page. If all goes well, a help document with

- build instructions
- doxygen code documentation
- other materials on wiki

can be downloaded as an eclipse plug-in.

Licensed under UIUC/NCSA open-source license
