As a society we continue to face a wide range of complex challenges – environmental pressure, climate change, booming population and an ever-changing technological, economic and social landscape.

At Monash Science, we believe in making a difference to the world by using our science training and knowledge to influence our future. Science is about learning how to analyse problems and solve them.

Our future depends on bright minds, innovators and collaborators who can create solutions that will change the world. With a science degree from Monash University, the possibilities to be a driver of change are endless.

You could find yourself on a field trip searching for fossils in Antarctica, exploring gravitational waves using the LIGO Observatory in the US, or influencing national and international policy on environmental issues.

Or you might want to be an entrepreneurial scientist using your training and knowledge in the business, government and not-for-profit sectors.

Our Bachelor of Science degree is one of the most flexible and popular science degrees in Australia.

In addition to this flexible program, we offer many other courses including the Bachelor of Applied Data Science, the Bachelor of Applied Data Science Advanced (Honours), the Bachelor of Science Advanced Research (Honours) and the Bachelor of Science Advanced Global Challenges (Honours).

When you join Monash Science, you will be immersed in a science precinct that is among the most vibrant and dynamic in the world. Our students are taught, nurtured and mentored by scientists who are at the forefront of their disciplines.

Our world-class staff and teaching environment will provide you with a globally-recognised education and the skills to make a difference in the world through science. I look forward to welcoming you, our future scientists, leaders and world-changers, in 2023.

PROFESSOR JORDAN NASH
Dean, Faculty of Science Monash University
FLEXIBILITY
Our science degrees offer flexibility and choice unrivalled by any other Australian university. You can:
• Study subjects across the scientific spectrum, and even take units from other areas such as arts, music and business, just to name a few.
• Graduate with two degrees in less time, by studying a double degree.
• Build your course around your passion for science, and not be directed to study subject areas outside science that may not interest you.

REAL EXPERIENCE FROM THE WORLD’S BEST
• Learn from academics who are leaders in their scientific disciplines.
• We offer almost twice the number of lab hours as most Australian universities.
• Get involved in a research project – some of our students have been published in leading scientific journals before graduating!

THE WORLD IS YOUR CLASSROOM
• We offer a number of units that can take you from the classroom out into the field – to Heron Island’s pristine coral cays, the jungles of Borneo, and the rocky outcrops of the Cinque Terre in Italy.
• Seize the opportunity to assist our senior staff with research into topics as diverse as natural resource exploration in Tanzania, fossicking for fossils in Antarctica and developing solutions to water purity using graphene.
• Take advantage of the Monash Abroad exchange program and study for one or two semesters at our Monash Malaysia campus, or at one of our 100 university partners worldwide.

STUDY IN ONE OF THE WORLD’S AND AUSTRALIA’S BEST SCIENCE PRECINCTS

SCIENCE STUDENT LEARNING LOUNGE
We have two purpose-built student lounges just for science students, along with many other comfortable breakout spaces for studying or just hanging out.

EARTH SCIENCES GARDEN
We take a unique approach to teaching. For example, you’ll study geology by working in our Earth Sciences Garden – an outdoor classroom like no other; the first of its kind in Australia and the most comprehensive worldwide.

JOCK MARSHALL RESERVE
We’re home to the three-hectare Jock Marshall Reserve, which allows you to study the natural world in the great outdoors. The reserve includes a new integrated learning facility.

GREEN CHEMICAL FUTURES BUILDING
Budding chemists take note – our home of chemistry is an award-winning, multidisciplinary innovation hub where teaching, research and industry mix in an exciting, creative space.

PHYSICS AND ASTRONOMY COLLABORATIVE LEARNING ENVIRONMENT (PACE)
It’s the end of traditional lectures in our first-year physics and astrophysics classes. Instead you’ll benefit from problem-based learning through hands-on activities in a collaborative learning environment, with purpose-built spaces to foster teamwork and improve learning outcomes.

NEW HORIZONS RESEARCH CENTRE
This houses the research laboratories of the School of Physics and Astronomy. It brings together world-leading researchers from Monash and CSIRO, with diverse backgrounds in physics, astrophysics, engineering, mathematics, IT and biosciences.

MATHS LEARNING CENTRE
The Mathematics Learning Centre is a drop-in centre, which offers one-to-one help if you’re enrolled in mathematics and statistics units.

THE HUTTON-WESTFOLD OBSERVATORY
The Hutton-Westfold Observatory at our Clayton campus allows you to observe stars and distant galaxies that are 10,000 times fainter than what can be seen with the unaided eye.
GET READY FOR THE REAL WORLD

We provide career coaching and guidance to prepare you for the world after university.

• Build your professional experience with an internship or project. A science industry internship will give you real-world experience and count as credit towards your degree.
• Our ‘Career skills for scientists’ unit uses work-related activities to enhance valuable skills such as commercial awareness, leadership, teamwork and communication.
• Our recruitment agency, Monash Talent, can help you find your dream job when you graduate.
• The jobs database and other services offered by Monash Career Connect assists you with work opportunities during your studies and after graduation.
• We have a proven track record of providing a springboard to a huge range of careers and graduate research in science and beyond. Depending on your major, you may be eligible to join the following professional bodies: Royal Society of Chemistry, Australian Institute of Biology, Australian Society for Microbiology, Environment Institute of Australia, and many others.

For more information on our help and support services, visit monash.edu/science/current-students/career-prospects.
SUPPORTING YOU ALL THE WAY

Your success is our success. We partner with you to bring out your best. Science at Monash offers a range of services to help you start your course, and then throughout it.

Science Student Services
Our expert course advisors can help you shape your course according to your interests, passions and career goals.

Science Transition Program
We’ve developed an online hub to help you make a smooth transition to uni. Each week when you log in, you’ll see tips on where to get lecture notes, how to access library materials, managing your workload, preparing for exams and much more.

Drop-in study centres
We offer drop-in study centres for first-year students where you’ll find free tutoring and academic support. If you need assistance with lecture, tutorial or laboratory class content, the tutors in the learning centres can help. Many of them are also instructors in first-year units, so they have extensive knowledge of the unit, assignments and assessment tasks you need to complete. Tutors can also assist with developing study plans, provide tips on study techniques, and show you how to access the range of University support services available.

Mentors
Our Science Peer Mentoring Program matches you with a senior Science student who can help you get settled in and make friends as you begin your studies. The six-week program provides you with opportunities to meet like-minded fellow students in a social setting.

Becoming a mentor
As a mentor, you play a vital part in helping new students make a smooth transition from high school to university life. You’ll meet your mentee weekly and organize fun activities to help them settle in, make friends and have a fun and successful first year. As a mentor, you receive training and support from your own ‘super mentor’.

Monash Science clubs and societies
The Monash Science Society (MSS) is one of our largest student clubs, offering a range of activities throughout the year. There are also a number of other science societies such as the Biological Society, CHAMPS, MASS³, and the Monash Atmospheric Geosciences and Environmental Society that provide a great opportunity to make friends and get involved.

Monash University has more than 150 student clubs and societies, as well as plenty of opportunities to become involved through the many different volunteering and leadership initiatives.

Science Future Leaders Program
Influence and inspire the next generation of scientists by joining the Science Future Leaders Program. Activities undertaken during the year-long program will help you develop a range of skills relevant to leadership in your studies and career. These include a camp, a series of leadership seminars and workshops, and the opportunity to practice leadership within the University, your chosen profession, and/or the wider community.

Science Student Ambassador Program
Science student ambassadors play a key role in promoting science programs and activities to future and current students. You’ll gain hands-on experience with public speaking, social media and events. Science student ambassadors receive up to $1000 as recognition of their commitment to the role.

GET INVOLVED

We offer many additional opportunities to develop networks within the University and to help you take your Science degree to the next level.

Chat to our VTAC selection officers about the right course for you. Discover entry requirements and pathways to your dream course.

monash.edu/science/future-students/your-essential-guide-domestic-students
If you’re interested in mastering big data and helping others to understand it, this is the course for you.

• This program of study will provide you with the skills necessary to solve a wide range of problems.
• It’s a comprehensive course which will develop your technical know-how in being able to approach data challenges.
• Through selected streams, you’ll develop your passion for the physical sciences, sociological or anthropological studies, business or engineering.
• Working in groups and on individual projects, you’ll bring together key skills in IT and mathematics, and apply these to real-life projects.

Subject prerequisites
VCE
English: Units 3 and 4: a study score of at least 27 in English (EAL) or 25 in English other than EAL.
Maths: Units 3 and 4: a study score of at least 25 in Mathematical Methods (any) or Specialist Mathematics.

IB
English: Level 1.
Maths: Level 3.

For prerequisite subject requirements, please refer to page 21.

Our VTAC Subject Adjustment Bonus
This rewards students studying more than one Year 12 science subject — this could improve your ranking and eligibility by providing additional points towards your ATAR aggregate.

Satisfactory completion of this course may provide credit toward a Monash master’s by coursework degree and will provide the preparation necessary to undertake a master’s by research degree or a doctoral (PhD) degree.

Subject prerequisites
VCE
English: Units 3 and 4: a study score of at least 27 in English (EAL) or 25 in English other than EAL.
Maths: Units 3 and 4: a study score of at least 30 in Mathematical Methods (any) or Specialist Mathematics.

IB
English: Level 1.
Maths: Level 3.

For prerequisite subject requirements, please refer to page 21.

Bachelor of APPLIED DATA SCIENCE

This is an advanced program for those passionate about data science.

• This four-year specialist course brings together studies in IT and mathematics in a series of interdisciplinary problem-solving challenges.
• The degree will give you the skills necessary to provide solutions to a wide range of problems.
• Research and analysis into big data has the capacity to make a positive impact on our daily lives.
• Through selected streams, you’ll develop your passion for the physical sciences, sociological or anthropological studies, business or engineering.

Subject prerequisites
VCE
English: Units 3 and 4: a study score of at least 27 in English (EAL) or 25 in English other than EAL.
Maths: Units 3 and 4: a study score of at least 30 in Mathematical Methods (any) or Specialist Mathematics.

IB
English: Level 1.
Maths: Level 3.

For prerequisite subject requirements, please refer to page 21.

Bachelor of APPLIED DATA SCIENCE ADVANCED (Honours)

The Monash Guarantee (MG) allows entry into select courses by lowering the ATAR for all eligible applicants.

The Monash Guarantee (MG) allows entry into select courses by lowering the ATAR for all eligible applicants.

Bachelor of SCIENCE

The choice, flexibility and depth across the huge range of discipline subjects available at Monash means you’ll graduate with a degree unique to you, tailored to your individual expertise, interests and career aspirations.

- Flexible, not locked-in from day one to a defined area of science.
- Choose from 25 majors.
- Specialise in up to two majors – you can study an additional major from Science or from another eligible faculty.

Our VTAC Subject Adjustment Bonus

This rewards students studying more than one Year 12 science subject – this could improve your ranking and eligibility by providing additional points towards your ATAR aggregate.

Subject prerequisites

VCE

English: Units 3 and 4: a study score of at least 27 in English (EAL) or 25 in English other than EAL.
Maths or Science: Units 3 and 4: a study score of at least 25 in one of Biology, Chemistry, Environmental Science, Geography, Mathematical Methods (any), Specialist Mathematics, Physics or Psychology.
IB

English: Level 1.
Science: from approved list.
For prerequisite subject requirements, please refer to page 21.

Bachelor of SCIENCE

ADVANCED–GLOBAL CHALLENGES

(Honours)

This course is the only one of its kind in Australia.
- Combines science with business and industry.
- One internship, which can be an international placement.
- Includes an ‘Impact through science’ stream that provides high-level training in leadership, persuasive communication, entrepreneurship, policy, ethics and corporate social responsibility.
- Transforms scientific expertise into a thriving business venture or social enterprise.

Visit *monash.edu/science* to view entry requirements and to read more about our courses.

Subject prerequisites

VCE

English: Units 3 and 4: a study score of at least 35 in English (EAL) or 30 in English other than EAL.
Maths or Science: Units 3 and 4: a study score of at least 30 in Mathematical Methods (any), Specialist Mathematics, Physics or Psychology.
IB

English: Level 2.
Science: higher score required.
For prerequisite subject requirements, please refer to page 21.

Bachelor of SCIENCE

ADVANCED–RESEARCH

(Honours)

Do you see yourself making a difference in the world through the advancement of scientific research? If so, this is the course for you.
- Designed for students who intend to pursue a career in research.
- Allows for accelerated learning by progressing earlier to higher-level and advanced units.
- Enhanced opportunities for research projects.
- Research mentoring by leading scientists.
- You must undertake two Science majors.
- Direct entry into a PhD.

Subject prerequisites

VCE

English: Units 3 and 4: a study score of at least 35 in English (EAL) or 30 in English other than EAL.
Maths: Units 3 and 4: a study score of at least 30 in Mathematical Methods (any).
Maths or Science: Units 3 and 4: a study score of at least 30 in one of Biology, Chemistry, Environmental Science, Geography, Specialist Mathematics, Physics or Psychology.
IB

English: Level 2.
Science: higher score required in two subjects.
For prerequisite subject requirements, please refer to page 21.

COURSE STRUCTURE

This is what your studies will look like as a Bachelor of Science student. You’ll have the option to take electives, allowing you to choose subjects outside of Science or extra Science subjects, depending on your interests.

YEAR 1

DOUBLE DEGREES

If you have a passion for an area outside of science, or would like to go into a field in which scientific knowledge would be an advantage, a double degree could be the perfect choice for you. Combining Science with another area of specialisation gives you a distinct set of skills and helps you stand out in today’s competitive job market.

SECOND DEGREES AVAILABLE

- Bachelor of Arts
- Bachelor of Biomedical Science
- Bachelor of Commerce
- Bachelor of Computer Science
- Bachelor of Global Studies
- Bachelor of Education (Honours)
- Bachelor of Engineering (Honours)
- Bachelor of Information Technology
- Bachelor of Laws (Honours)
- Bachelor of Music

For more information about double degrees, including how they work and their benefits, visit *monash.edu/science/double-degrees*.

1. The scores provided are to be used as a guide only, and are either the lowest selection rank to which an offer was made in 2022 or an estimate (E). Australian domestic students ATAR.
2. International students should consult *monash.edu/.study*.
WHERE YOUR FIRST YEAR OF STUDY CAN TAKE YOU

WHAT YOU CAN STUDY IN FIRST YEAR

BIOLOGY

Choose from:
-Blueprints for life
-Life on Earth
-Environmental biology

Possible majors
- Biotechnology
- Developmental biology
- Ecology and conservation biology
- Environmental science (extended major)
- Genetics and genomics
- Human pathology
- Immunology
- Microbiology
- Pharmacology
- Physiology
- Plant sciences
- Zoology

Biological majors

Career options
- Agricultural researcher
- Animal technician
- Biotechnician
- Biotechnologist
- Biotechnology product developer
- Botanist/plant scientist
- Clinical scientist
- Cytopathologist
- Ecologist entomologist
- Environmental/conservation biologist
- Environmental consultant
- Environmental health promoter
- Evolution and adaptation biologist
- Fauna assessment officer
- Geneticist
- Hospital scientist
- Laboratory technician
- Marine/freshwater biologist
- Medical researcher
- Microbiologist
- Museum curator
- Park ranger
- Patent officer
- Research scientist
- Science journalist
- Science teacher
- Soil scientist
- University lecturer
- Wildlife manager
- Zoologist

CHEMISTRY

Choose from:
-Chemistry 1
-Chemistry 2
-Chemistry 1 advanced
-Chemistry 2 advanced

Possible majors
- Analytical chemist
- Biomedical chemistry
- Biotechnology
- Biotechnology sales and marketing manager
- Biochemistry
- Drug discovery chemist
- Environmental/water chemist
- Forensic chemist
- Hospital or medical laboratory technician
- Industrial chemist
- Instrument specialist
- Molecular design chemist
- Occupational health and safety officer
- Occupational hygiene specialist
- Paint chemist
- Perfumer
- Pharmaceutical technology
- Pharmaceutical representative
- Polymer chemist/membrane specialist
- Process control specialist
- Quality controller
- Research chemist
- Risk-management consultant
- Science journalist
- Teacher
- Toxicologist
- Waste and resources management consultant
- Water quality and management consultant
- Winemaker

Career options
- Agricultural researcher
- Biomedical scientist
- Biotechnology
- Biotechnology sales and marketing manager
- Chemical engineer
- Clinical scientist
- Forensic scientist
- Hospital or medical laboratory technician
- Industrial chemist
- Instrument specialist
- Molecular design chemist
- Occupational health and safety officer
- Occupational hygiene specialist
- Paint chemist
- Perfumer
- Pharmaceutical technology
- Pharmaceutical representative
- Polymer chemist/membrane specialist
- Process control specialist
- Quality controller
- Research chemist
- Risk-management consultant
- Science journalist
- Teacher
- Toxicologist
- Waste and resources management consultant
- Water quality and management consultant
- Winemaker

EARTH, ATMOSPHERE AND ENVIRONMENT

Choose from:
-Earth, atmosphere and environment 1
-Earth, atmosphere and environment 2

Possible majors
- Atmospheric science
- Earth science
- Environmental science (extended major)
- Geophysics
- Geoscience
- Environmental scientist
- Environmental consultant
- Environmental geoscientist
- Environmental scientist
- Geologist (analytical laboratories)
- Geological survey scientist
- Geologist (mineral/petroleum exploration)
- Geophysicist
- Geospatial analyst
- Government advisor (environmental policy and management)
- Hydrologist
- Hydrogeologist
- Landcare project manager
- Oceanographer
- Marine scientist
- Natural resources manager
- Palaeontologist
- Park ranger
- Planetary scientist
- Policy officer
- Research chemist
- Risk manager (insurance companies and banks)
- Science communicator
- Secondary educator
- Seismologist
- Soil scientist
- Virologist
- Water resource manager

Career options
- Agricultural researcher
- Atmospheric scientist
- Biomedical scientist
- Biotechnology
- Biotechnology sales and marketing manager
- Chemical engineer
- Clinical scientist
- Forensic scientist
- Hospital or medical laboratory technician
- Industrial chemist
- Instrument specialist
- Molecular design chemist
- Occupational health and safety officer
- Occupational hygiene specialist
- Paint chemist
- Perfumer
- Pharmaceutical technology
- Pharmaceutical representative
- Polymer chemist/membrane specialist
- Process control specialist
- Quality controller
- Research chemist
- Risk-management consultant
- Science journalist
- Teacher
- Toxicologist
- Waste and resources management consultant
- Water quality and management consultant
- Winemaker

MATHEMATICS

Choose from:
- Functions and their applications
- Analysis of change
- Techniques for modeling
- Techniques for modelling (advanced)
- Discrete mathematics for computer science
- Multivariable calculus
- Multivariable calculus (advanced)
- Introduction to statistical reasoning
- Statistical methods for science
- Introduction to scientific coding

Possible majors
- Applied mathematics
- Financial and insurance mathematics (extended major)
- Mathematics
- Mathematical statistics
- Pure mathematics

Career options
- Agricultural researcher
- Atmospheric scientist
- Biomedical scientist
- Biotechnology
- Biotechnology sales and marketing manager
- Chemical engineer
- Clinical scientist
- Forensic scientist
- Hospital or medical laboratory technician
- Industrial chemist
- Instrument specialist
- Molecular design chemist
- Occupational health and safety officer
- Occupational hygiene specialist
- Paint chemist
- Perfumer
- Pharmaceutical technology
- Pharmaceutical representative
- Polymer chemist/membrane specialist
- Process control specialist
- Quality controller
- Research chemist
- Risk-management consultant
- Science journalist
- Teacher
- Toxicologist
- Waste and resources management consultant
- Water quality and management consultant
- Winemaker

PHYSICS

Choose from:
- Classical physics and relativity
- Fields and quantum physics
- Physics for the living world
- Physics for engineering
- Foundation physics
- Earth to cosmos – introductory astronomy
- Life in the universe – astrophysics

Possible majors
- Astrophysics
- Physics
- Physiology

Career options
- Agricultural researcher
- Atmospheric scientist
- Biomedical scientist
- Biotechnology
- Biotechnology sales and marketing manager
- Chemical engineer
- Clinical scientist
- Forensic scientist
- Hospital or medical laboratory technician
- Industrial chemist
- Instrument specialist
- Molecular design chemist
- Occupational health and safety officer
- Occupational hygiene specialist
- Paint chemist
- Perfumer
- Pharmaceutical technology
- Pharmaceutical representative
- Polymer chemist/membrane specialist
- Process control specialist
- Quality controller
- Research chemist
- Risk-management consultant
- Science journalist
- Teacher
- Toxicologist
- Waste and resources management consultant
- Water quality and management consultant
- Winemaker

COMPUTATIONAL SCIENCE

Choose from:
- Introduction to computer science
- Algorithms and programming fundamentals in python

Possible majors
- Computational science

Career options
- Business analyst
- Business operations
- Coordinator
- Consultant business systems
- Analyst
- Graduate project manager
- IT analyst
- IT consultant
- IT domain specialist
- IT support
- Project manager
- Software consultant
- Software developer
- Software analyst
- Strategic analyst
- Technology consultant
- Web developer

PSYCHOLOGY

Choose from:
- Psychology 1A
- Psychology 1B

Possible majors
- Psychology

Career options
- Agricultural researcher
- Animal technician
- Biotechnician
- Biotechnologist
- Biotechnology product developer
- Botanist/plant scientist
- Clinical scientist
- Cytopathologist
- Ecologist entomologist
- Environmental/conservation biologist
- Environmental consultant
- Environmental health promoter
- Evolution and adaptation biologist
- Fauna assessment officer
- Geneticist
- Hospital scientist
- Laboratory technician
- Marine/freshwater biologist
- Medical researcher
- Microbiologist
- Museum curator
- Park ranger
- Patent officer
- Research scientist
- Science journalist
- Science teacher
- Soil scientist
- University lecturer
- Wildlife manager
- Zoologist

For more information about majors and sequences, visit monash.edu/science/majors
Please note: some careers may require further study.
Within the Bachelor of Science, at least eight units will make up your Science major. You’ll also have eight units of free electives, which offer you the flexibility to shape your course in a number of different ways—such as extending your major to add depth, adding a second major or a minor from the same or another course, or studying a range of units from across the University.

**APPLIED MATHEMATICS**
Apply techniques and models to solve problems from medicine, engineering, information technology and commerce.
- Explain observations or predict future trends.
- Contribute to new theories and adapt existing mathematical approaches to new problems.
- Develop key technical skills in advanced calculus, linear algebra, differential equations and computational methods.

**CHEMISTRY**
Study the science of matter and energy.
- Investigate the structure of substances.
- See how atoms and molecules react and interact, and how this affects materials, medicine and technology.
- Learn about synthetic and analytical chemistry, medicinal and biological chemistry, and physical and environmental chemistry.
- Undertake lab work in purpose-built chemistry facilities.

**CLIMATE AND ATMOSPHERIC SCIENCE**
Study climate and atmospheric science, meteorology and climatology; exploring the links between the Earth’s atmosphere, cryosphere, oceans and landmasses.
- Study aspects of Earth science, applied mathematics and physics that drive weather and climate.
- Explore how we can better forecast day-to-day weather and understand our changing climate using data science and advanced modeling.

**DEVELOPMENTAL BIOLOGY**
Explore the processes of development from a single cell to an adult organism.
- Investigate cellular and molecular mechanisms underlying normal and abnormal development.
- Apply laboratory practices incorporating cellular, molecular and imaging techniques.
- Study topics such as gene expression, stem cell biology, tissue engineering, regenerative biology and medicine.

**EARTH SCIENCE**
Study the Earth’s geology, climate, oceans, and environment.
- Explore how the Earth has changed over geological time and how factors including plate tectonics, volcanism and climate affect the Earth’s surface and environment.
- Undertake exciting fieldwork, analyse and model Earth and climate processes, and engage in frontier research.
- Learn how to responsibly manage landscapes, water and other major resources, creating pathways to a sustainable future.
- Earth science offers three streams: Earth’s physical environment, Earth’s climate, and Geosciences.

**ENVIRONMENTAL SCIENCE**
Study the interactions between the physical, chemical, geophysical and biological components and processes of the environment.
- Explore current environmental challenges such as climate change, water and land management, resource use and sustainability.
- Apply scientific information to the management of natural systems.
- Understand how environmental science can affect policy and management changes.
- The extended major in environmental science includes the choice of three streams: ecology, climate and environmental earth sciences.
- The extended major in environmental science includes the choice of three streams: ecology, climate and environmental earth sciences.

**ASTROPHYSICS**
Use observations and the laws of physics to understand the universe and its constituents.
- Study celestial objects such as planets and stars, comets, pulsars and quasars, black holes and galaxies.
- Link the smallest and the largest objects in the universe, to super clusters of galaxies.
- Explore the possibility of extraterrestrial life.
- Use the latest technology—from large telescopes to supercomputers.

**FINANCIAL AND INSURANCE MATHEMATICS**
Apply mathematical modeling and statistical techniques to understand and assess risk in insurance and financial markets.
- Develop financial and risk models.
- Evolve financial and investment business strategies.
- Demonstrate high-level critical thinking skills to analyse, use and interpret data.

**BIOCHEMISTRY**
Explore the chemical components and biological processes of all living systems.
- Study the chemistry within the biological processes that form the foundation for all living matter.
- Understand the cause of disease.
- See how effective treatments and vaccines are developed.

**COMPUTATIONAL SCIENCE**
Solve scientific problems through computers.
- Construct and apply mathematical models, simulations and data-analysis techniques.
- Learn the fundamentals of algorithmic problem-solving to advanced programming, 3D computer graphics and intelligent systems.
- Undertake parallel computation for massive data analysis and simulation to tackle the world’s current and emerging problems.

**CONSERVATION BIOLOGY**
Study the ecological and evolutionary interactions between organisms and their environments.
- Explore conservation management.
- Develop ways to reduce the escalating biodiversity loss within our world.
- Study ecosystem structure and function.
- Discover how organisms adapt to changing environments.

**EDUCATIONAL SCIENCE**
- Explore the science of learning and teaching.
- Develop effective teaching strategies.
- Understand the psychological, sociological and cultural influences on learning.
- Undertake fieldwork placements in schools and educational settings.

**ENVIRONMENTAL SCIENCE**
Study the interactions between the physical, chemical, geophysical and biological components and processes of the environment.
- Explore current environmental challenges such as climate change, water and land management, resource use and sustainability.
- Apply scientific information to the management of natural systems.
- Understand how environmental science can affect policy and management changes.
- The extended major in environmental science includes the choice of three streams: ecology, climate and environmental earth sciences.
- The extended major in environmental science includes the choice of three streams: ecology, climate and environmental earth sciences.

**FINANCIAL AND INSURANCE MATHEMATICS**
Apply mathematical modeling and statistical techniques to understand and assess risk in insurance and financial markets.
- Develop financial and risk models.
- Evolve financial and investment business strategies.
- Demonstrate high-level critical thinking skills to analyse, use and interpret data.
GEOPHYSICAL SCIENCE
Study the links between society and the
natural environment to find innovative solutions
for global challenges.
• Learn physical and human geography, including climatology,
tectonics, soil science and sustainability theory.
• Explore natural hazards, climate change, vegetation dynamics,
how landscapes change, urbanisation and environmental policy,
as well as land, coast and water management.

HUMAN PATHOLOGY
Study disease processes, including cell death,
inflammation, disorders of immunity and neoplasia.
• Learn about organ system failure during disease and injury,
and how this knowledge is critical for diagnosis, prognosis
and medical intervention.
• Develop a comprehensive knowledge of cell injury, wound
healing, fluid and vascular disorders, growth disorders and
immunopathology.
• Apply practical laboratory skills such as microscopy,
histological staining techniques and diagnosis.

IMMUNOLOGY
Learn how the immune system protects us from
harmful pathogens such as bacteria and viruses.
• Study the immune system’s mechanisms in cancers,
allergies, autoimmunity and transplant rejection.
• Explore how the function of the immune system can be
manipulated to improve development of vaccines
and cures for autoimmune diseases.

MATHEMATICAL STATISTICS
Study mathematical theory and the applications
of this theory in the real world.
• Explore models involving random, unpredictable components,
and learn how to use these models to make informed decisions.
• Develop key technical skills in advanced calculus and linear algebra.

MATHEMATICS
Discover how mathematics is used to describe,
model, understand and even create aspects of the
world around us.
• Develop key technical skills in advanced calculus and
linear algebra.
• Explore techniques for modelling and how to use these
techniques to solve complex problems.

PHYSIOLOGY
Learn how the body functions in health and disease.
• Explore how body systems adapt when challenged by
stresses such as exercise or environmental extremes,
and how body functions change in diseased states.
• Examine the nerves and muscles, the brain and hormones,
and the body’s functionality from the molecular and cellular
through to the body systems level.

PHARMACOLOGY
Study the effect of drugs on living organisms
and how to scientifically define the term ‘drug’.
• Discover how drugs affect cell responses, including
whether drug action will be selective and long-lasting,
and the nature of side effects.
• Learn about drugs used in the prevention or treatment
of an illness and those that are taken for recreation.

PLANT SCIENCES
Study the structure, function, genetics and
diversity of plants – from algae and mosses through
to gymnosperms and angiosperms.
• Study the diversity, structure, molecular biology and
how they interact with humans and other living organisms.
• Study the rise of antibiotic resistance in medically
important bacteria.
• Discover how microbiobials are involved in the
development of vaccines.

IMMUNOLOGY
Learn how the immune system protects us from
harmful pathogens such as bacteria and viruses.
• Study the immune system’s mechanisms in cancers,
allergies, autoimmunity and transplant rejection.
• Explore how the function of the immune system can be
manipulated to improve development of vaccines
and cures for autoimmune diseases.

ZOLOGY
Study the diversity of animals, including their
evolution, form, function, behaviour and ecology.
• Explore the interactions of animals with their environments
through food chains and competition for resources.
• Understand the impact that parasites and pests have
on our natural food supplies.
• Undertake field trips in Australia and overseas.

PSYCHOLOGY
Study the mind and behaviour, including
investigations of the brain, learning, memory,
reasoning, decision-making, language, developmental
and social processes, personality and mental health.
• Examine the practical and ethical applications of
psychological research.
• Opportunity to complete the Australian Psychology
Accreditation Council (APAC)-accredited study for those
wanting to specialise in psychology.

PHYSICS
Study space and time, matter and energy.
• Explore the full spectrum of topics, from atom optics
and BECs to particle physics and quantum science.
• Investigate recent discoveries such as the Higgs boson
and gravitational waves.
• See how physics underpins other science disciplines,
including medicine and engineering.
• Develop high-level analytical, numerical modelling and
problem-solving skills.

Pure mathematics deals with the abstract,
the rigorous and the beauty of perfection.
• Explore how pure mathematics becomes the basis for
applied mathematics to solve the most concrete problems.
• See how the theory of prime numbers is fundamental to
security systems and electronic banking.
• Apply high-level knowledge in advanced analysis,
algebra and geometry.

MICROBIOLOGY
Learn about micro-organisms, including bacteria,
viruses, protozoa, algae and fungi.
• Study their diversity, structure, molecular biology and
how they interact with humans and other living organisms.
• Study the rise of antibiotic resistance in medically
important bacteria.
• Discover how microbiobials are involved in the
development of vaccines.

PHYSICS
Study space and time, matter and energy.
• Explore the full spectrum of topics, from atom optics
and BECs to particle physics and quantum science.
• Investigate recent discoveries such as the Higgs boson
and gravitational waves.
• See how physics underpins other science disciplines,
including medicine and engineering.
• Develop high-level analytical, numerical modelling and
problem-solving skills.

For more information about majors and
sequences, visit monash.edu/science/majors
Please note: some careers may require further study.
PATHWAYS INTO SCIENCE

If you don’t achieve the ‘right’ ATAR, it isn’t the end of the world – there are alternative pathways into a Bachelor of Science at Monash.

Diploma of Higher Education (DoHE)
An ATAR of at least 60 is required, with a study score of at least 27 in English (EAL) or 25 in any other English.

Monash University Foundation Year
(international students only)
Students completing Monash University Foundation Year can enter the Bachelor of Science at first year.

TAFE qualifications
(graded)
Science‑related Certificate IV or Diploma.

Diploma of Science, Monash College
(full-fee paying)
Upon completion of Year 12 Australian equivalent, students can undertake an eight-month Diploma of Science at Monash College, which offers a direct pathway into the second year of a science degree.

Single University units
Mature-age students can apply to study two single (science) University units. Upon completion of these units with a minimum average result of 60 per cent, and after satisfying English language requirements, students are eligible to apply for entry into the Bachelor of Science.

Transfer from another university
With a science-related degree.

COMPLETE A BACHELOR OF SCIENCE
3 years (full-time)

COMPLETE A BACHELOR OF SCIENCE
+ HONOURS IN PSYCHOLOGY
1 year (full-time)

For more information about pathways into Science, visit monash.edu/science/pathways

USING SCIENCE AS A PATHWAY TO OTHER STUDY AREAS

A Monash Bachelor of Science forms a strong foundation for students wanting to work towards further study in medical, pharmaceutical or psychology fields*.

COMPLETE FIRST YEAR BACHELOR OF SCIENCE
使用你的 Bachelor of Science 年级作为通往其他 Monash 专业的桥梁。

COMPLETE A BACHELOR OF SCIENCE
3 years (full-time)

Graduate-entry Master of Professional Engineering
2.5 years (full-time)

Graduate-entry Bachelor of Pharmacy/Master of Pharmacy
3 years (full-time)

Graduate-entry Bachelor of Medical Science and Doctor of Medicine (MD)
4 years (full-time)

Graduate study in psychology
– Master of Psychology
2 years (full-time)

Range of careers depending upon degree of choice.

Engineer or employment within engineering-related role

Pharmacist or employment within science-related role

Medical practitioner

Veterinary surgeon

For more information about Science as a pathway into other study areas, visit monash.edu/science/pathways

* Entry requirements apply; interested applicants should enquire with destination courses.
INTERNATIONAL ENTRY REQUIREMENTS

To locate ‘how to calculate your entry score’ for the listed qualifications in this guide refer to the 2022 Undergraduate Course Guide International located at: monash.edu/study/why-choose-monash/information-for-schools-and-teachers/publications

Find out more about one of our on campus outdoor classrooms, the Jock Marshall Reserve

SUBJECT LEVELS PREREQUISITE

All Monash undergraduate courses require you to have previously studied and achieved required standards in certain specified subjects at an Australian level known as prerequisite subjects. Different prerequisite subject levels apply to each undergraduate course and can be located throughout this guide. The table below outlines acceptable subjects that meet these prerequisite subject levels for VCE and IB.

<table>
<thead>
<tr>
<th>English</th>
<th>Mathematics</th>
<th>Science</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Level 1</strong></td>
<td>6.5, higher</td>
<td>English (Australian Year 12 equivalent)</td>
</tr>
<tr>
<td><strong>Level 2</strong></td>
<td>7.0 or higher</td>
<td>Mathematics: Analysis and Approaches, OR</td>
</tr>
<tr>
<td><strong>Level 3</strong></td>
<td>7.5 or higher</td>
<td>Mathematics, OR</td>
</tr>
<tr>
<td><strong>Level 3+</strong></td>
<td>8.0 or higher</td>
<td>Further Mathematics, OR</td>
</tr>
</tbody>
</table>

ACADEMIC IELTS: General Level 8.5, with no band lower than 8.0.

INTERNET BASED TOEFL: 79 overall, 21 Writing, 13 Reading, 12 Listening, 18 Speaking.

**Science**

| **Level 1** | 6.0, higher | Science approved list (Australian Year 12 equivalent) |
| **Level 2** | 6.5, higher | Mathematics: Analysis and Approaches, OR |
| **Level 3** | 7.0 or higher | Mathematics, OR |
| **Level 3+** | 7.5 or higher | Further Mathematics, OR |

ACADEMIC IELTS: General Level 7.5, with no band lower than 7.0.

INTERNET BASED TOEFL: 64 overall, 18 Writing, 12 Reading, 12 Listening, 20 Speaking.

Pre-requisite subjects: High scores in Mathematics: Analysis and Approaches, OR Mathematics, OR Further Mathematics, OR Mathematics: Analysis and Approaches.

**Course**

Bachelor of Applied Data Science

---

1. Science approved list (where specified otherwise): VCE: Biology, Chemistry, Environmental Science, Geography, Mathematical Methods (any), Specialist Mathematics, Physics or Psychology. IB (SL or HL): Biology, Chemistry, Environmental Systems and Societies (Eco), Further Mathematics (HL only), Mathematics, Mathematics: Analysis and Approaches, Mathematics: Applications and Interpretations (SL only). Physics or Psychology. Note: Mathematics or Further Mathematics can only be used if not counted towards the Maths prerequisite.

2. The Monash College Diploma Part 1 and Part 2 entry requirements published in this guide are for students commencing their undergraduate destination degree in 2023.

3. Scales must have been completed within 5 years of standard commencement. If you have not studied science in the past 5 years, you may still meet the requirements if you can demonstrate that you have engaged with science after your studies; this could be through work, teaching or volunteering in a capacity where you engaged with science in a meaningful way. If you believe you meet the requirements in this way, please provide your work experience, letter of support from an employer/supervisor or other form of written proof that can demonstrate how you have engaged with science in the past 5 years.

4. This course has additional selection requirements. Please refer to the course page for further details.

5. There is a limited number of places available in this course. The entry score is only indicative.
DISCOVER MORE TO CHANGE MORE AT OUR 2022 EVENTS

Monash Information Evenings
March to September
We'll be in your local area to answer your questions on everything you need to know about Monash, including our courses, accommodation, scholarships and student life.
monash.edu/information-evenings

Inside Monash
March to August
Get the inside story from our faculties about what it's really like to study at Monash.
monash.edu/inside-monash

Open Day
Open Day is your chance to experience what life at Monash is all about! You'll be able to explore our campuses, meet current students and staff, find out more about our courses, and get a taste of everything Monash has to offer.
