

BMedSc(Hons) Monash-Oxford Bioethics Program

When is it ethical to sedate a patient at the end of life? How should doctors disclose to patients that they are at risk of psychosis? How much should research participants be paid to be infected with a virus in a human challenge trial?

These topics and many more have been explored by BMedSc (Hons) students undertaking the Oxford-Monash Ethics Program. Co-run by the Uehiro Oxford Institute and the Monash Bioethics Centre, students spend 6 months at the University of Oxford covering general medical ethics principles and techniques as well as exploring one topic in depth for their BMedSc(Hons) project, under supervision by staff from both centres.

"Through the program, I deepened my understanding of the ethical considerations that underpin clinical practice, while developing strong academic and communication skills that complement my clinical training. I feel very grateful because it has opened so many doors for my future and helped set me up for a career as both a clinician and researcher."

– Jennifer Langford, alumni
