

Women's Health Research Program

Susan Davis, Robin Bell, Rakib Islam and Penny Robinson

The Women's Health Research Program studies women's health across the lifespan with a special interest in the role of sex steroids in women's health. We have large data sets which can be used to address specific questions related to women's health and are ideally suited for a SIP rotation.

Our team includes an endocrinologist, general practitioner, epidemiologist, biostatistician, research nurses, study managers, post doctoral fellows, PhD and Honours students.

Join our team for your SIP by emailing sharon.gurry@monash.edu
