“I chose mining engineering because mining is something that affects everybody’s life. Without mining, the metals and materials needed to develop new technology wouldn’t exist – materials such as lithium for batteries, and particular metals needed for computers and phones (to name a few).

I’m excited to be a part of something so important, and to be a part of developing new ways to make mining cleaner and safer. I have accepted a graduate position with Rio Tinto. I can’t wait to have a career which lets you have something different to look forward to every day.”

– Keely Simpson-Bull

MINING ENGINEERING STUDENT AND VICE PRESIDENT OF RESOURCES ENGINEERING STUDENT SOCIETY
